

ARM

ARMing the Enterprise with Active Vulnerability Management™ Solutions.

Your security posture is the level of protection provided for the assets in your IT environment. As an IT professional, you must maintain your security posture while providing an available and performing infrastructure for your enterprise business applications. Complex, rapidly changing network environments, the number and sophistication of computer attacks, and changing government regulations and corporate security policies make maintaining your security posture difficult.

Shavlik Technologies helps simplify complex network security and prevent security posture drift by ARMing your enterprise with Shavlik Active Vulnerability Management™ solutions. Shavlik solutions automatically and continuously assess, remediate, and manage patch levels, spyware and NonBizWare™, and security configuration settings.

Most vulnerability management solutions today only assess vulnerabilities. Shavlik Technologies provides a comprehensive solution that not only assesses vulnerabilities but also automatically remediates and manages them.

Assess, Remediate, Manage

Use Shavlik patch management, spyware and blacklist application control (NonBizWare™), and security configuration management technologies to assess, remediate, and manage your network security.

Assess the current state of your enterprise environment.

- ▶ Identify patch level vulnerabilities and unauthorized configuration changes.
- ▶ Identify unauthorized applications running on your network.
- ▶ Report noncompliance with technical policies, standards, and regulations.

Remediate vulnerabilities and exposures automatically in minutes rather than days.

- ▶ Patch operating systems and applications.
- ▶ Remove or disable spyware and unwanted applications.
- ▶ Configure security settings to comply with corporate policies and industry regulations.

Manage your security posture and prevent security posture drift.

- ▶ Report daily, weekly, and monthly on the latest threats and vulnerabilities.
- ▶ Actively monitor your network for new computers, vulnerabilities, and configuration changes.
- ▶ Quickly and easily provide executive-level reports demonstrating your compliance with enterprise security policies.

ARMing the Enterprise with Active Vulnerability Management™ Solutions.

Keeping security patches up to date, remediating spyware, removing unwanted or unapproved software, and enforcing security configuration settings should be implemented continuously, not just in response to problems. Shavlik Technologies continuously and automatically compares the security of every computer on your network to your enterprise security policies. If there is an exposure, Shavlik solutions automatically take action, remediating issues and quickly bringing computers back in compliance.

Enhancing Microsoft Systems Management Server and Windows Server Update Services

Shavlik solutions enhance and extend the platform support provided by Microsoft Systems Management Server (SMS) and Microsoft Windows Server Update Services (WSUS). Today SMS and WSUS cover only a subset of Microsoft operating system and server applications. Shavlik solutions expand this coverage to include a broad array of the most widely-used Microsoft products in your enterprise. Shavlik Active Vulnerability Management™ solutions also scan for and deploy patches to a number of third-party applications and commonly-used free products.

Simple, Fast Deployment

Shavlik solutions make network security easy to assess and vulnerabilities easy to remediate to ensure you are Simply Secure. You can download and install Shavlik solutions on your existing hardware and run your first scan within 30 minutes. These solutions quickly scan your network to identify every computer, including computers you may not be aware of. Within an hour, Shavlik solutions can complete remediation tasks that previously took two system administrators the better part of a day.

Agent or Agentless — Manage Your Way

Shavlik solutions provide options for agent and/or agentless architecture that allow you to manage your enterprise the way you want. You can select an agentless architecture, an agent-based architecture, or a mixed architecture. No matter which agent implementation you choose, the simple, powerful, flexible, and secure Shavlik architecture delivers the same rich vulnerability management feature set.

Only Shavlik Technologies ARMs your enterprise with a solution that automatically and continuously assesses, remediates, and manages security vulnerabilities related to patch levels, spyware, and security configuration settings. Use industry-leading solutions from Shavlik Technologies to maintain your security posture and prevent security posture drift.
